

## vrcHost

### **MDID3 Hosting**

Affordable hosting for your own and purchased content

### **MDID3 Support**

Support calls and contracts for your local installation

### **MDID Migrations**

Data migration service from your MDID2 installation

### **MDID Integration**

Integration with your local infrastructure

### **Custom Development**

New feature development to meet your needs

vrcHost specializes in installation, support, integration, customization, and feature development for the Madison Digital Image Database (MDID) project.

Originally developed at James Madison University, MDID is an open source digital content management system used at hundreds of institutions worldwide for teaching and scholarship in the visual arts.

vrcHost allows you to take advantage of MDID at your institution without having to install, manage and support MDID locally. We offer affordable hosting of MDID3 installations and integration services with your current infrastructure

In addition to a variety of content available from our partnering content vendors, you can of course upload your own institution's content and seamlessly search and use everything together.

Hosting plan fees depend on the number of users in the visual arts departments at your institution and the size of your digital media collection and start at only \$179 per month.

Running MDID on a local server at your institution? You can still get help through individual support calls or with a support contract, starting at \$99. And we can help you upgrade from MDID2 to MDID3, hosted either at your institution or with us.

Check out our demo site and try out MDID3 with a preview of 60,000 images from Archivision Inc., a vrcHost partnering content vendor.

vrcHost is not affiliated with James Madison University. Fees subject to change. Image © Archivision Inc.
